About the Artist

Melih Gördesli aka Melih Van Goer was born on 16 April 1986 into a Turkish immigrant family in Germany. At the age of four, he and his family moved to Vienna, where he completed his studies in "Medical Informatics" at the Technical University.

At the age of 23, he began writing books, engaging in socio-political and voluntary work. Amongst his numerous works, the books "The Mysticism of Science", "The History of Quantum Physics" and "No Country To Call My Own" are also available in English.

Over the course of his career, Melih Gördesli developed a taste for art, science and philosophy. With his modest background in graphic design, he launched his website "Van Goer", where he artistically lives out these preferences, sharing his ideas and inspiring people.

His work can soon be purchased from third-party providers.
